

The Business Case for Green Storm Water Infrastructure: GI in other Places

Types of Green Stormwater Infrastructure

Bioswale

Green Roof

Permeable Pavement

Tree Trench

Bioretention

More CSO / Wet Weather Programs are incorporating Green Infrastructure (GI)

- Large CSO Cities are joining the “**Billion Dollar Club**”
- EPA and States are allowing flexibility in CSO program schedules to incorporate Green Infrastructure
 - Just recently **Columbus, OH** and **Washington, DC** announced GI is being evaluated to replace/reduce planned tunnels
- Many other utilities and communities are currently planning, designing, and building GI
 - Philadelphia, Cincinnati, Cleveland, Syracuse, Lancaster, Seattle, etc

NYC GREEN INFRASTRUCTURE PLAN

A SUSTAINABLE STRATEGY FOR CLEAN WATERWAYS

Overview \$2.6 B

Lancaster, PA: Triple Bottom Line Benefits

2014 EPA report estimates the following benefits of implementing the GI Plan:

- \$4.2 million/year in energy, air quality, and climate-related benefits
- \$660,000 annually in reduced wastewater pumping and treatment costs (at current costs)
- \$120 million in avoided gray infrastructure (e.g., tanks, tunnels)

For an GI investment of \$80 - \$140 million (depending on level of integration)

The Economic Benefits of Green Infrastructure

A Case Study of Lancaster, PA

Map of Lancaster, PA provided by CH2M Hill, Inc.

February 2014
EPA 800-R-14-007

Favorable GI Implementation Scenarios

- Consider the **incremental or marginal** costs of GI for capital improvements such as: utility replacements, street repaving, sidewalk rehabilitation, street trees, traffic calming, curbing, etc.
 - *Integrating GI into other projects has resulted in 35 to 60% savings*

Alley in Lancaster, PA greened for 10% additional cost; captures 200,000 gallons per year

Before (July 2011)

Conventional reconstruction (8-inch reinforced concrete) ~\$20.30/SF

After (February 2012)

Green alley retrofit (permeable pavers with infiltration trench) ~\$22.40/SF

Park retrofit project in Lancaster, PA reveals high cost benefit

Runoff Reduction	694,600	gallons / yr
Bid	\$ 116,300	
Cost of Court Only	\$ 49,650	
Incremental Cost of GI	\$ 66,650	
Total Cost	\$ 0.17	/gallon
Incremental Cost of GI	\$ 0.10	/gallon
Gray Storage Cost	\$ 0.25-0.30	/gallon

Parking Lots Retrofits in Lancaster, PA

Final Parking Lot Costs

Parking Lot	Drainage Area	GI Area	Capture Volume	Construction Costs
Plum Street	23,402	4,680	511,000	\$89,862
Dauphin	20,582	4,516	411,000	\$61,822
Penn	22,758	4,219	455,000	\$60,749
Mifflin	13,242	1,324	265,000	\$27,013
TOTAL			1,642,000	\$239,446

COST PER GALLON = \$0.14/gallon

Gray Storage Cost = \$0.25-0.30/gallon

Asset management approach to maintenance provides true life-cycle costs

Cost Summary Table	
Net Present Value (\$) =	\$354,480.63
Equivalent Uniform Annual Cost (\$) =	\$22,091.35
Net Present Value per Area Managed (\$/acre)	\$354,480.63
Equivalent Uniform Annual Cost per Area Managed (\$/acre)	\$22,091.35

Life Cycle Costs = Present Value Cost of (Construction Costs + O&M Costs + Replacement Costs - Salvage Value) / (1 + Contingency)

Increased Home Values

FIGURE 1. Impact of 14 Neighborhood Parks on Adjacent Neighborhoods in Dallas-Fort Worth³⁸

The 14 parks were between 2.5 acres and 7.3 acres except for two that were .05 and 0.3 of an acre. They were "intermittently maintained" and were selected because of their ordinariness rather than their excellence. The parks were in the neighborhood of single-family houses. The analysis was based on 3,200 residential sales transactions. The price effects compared against home values a half mile from the parks are shown below. Homes adjacent to parks received an approximate price premium of 22 percent relative to properties a half mile away. Approximately 75 percent of the value associated with parks occurred within 600 feet of a park.

Cost of Community Services

- ***A mix of open space and residential development (possibly smaller lots with open space) or mixed use development creates a more favorable financial basis for community services***

Cost of Community Service (Hays County, TX study)

	Residential	Commercial/Industrial	Agricultural/ Open Space
Total County Revenues	\$82,662,828	\$16,461,526	\$13,105,427
Total County Service Expenditures	\$104,387,478	\$4,935,185	\$4,385,261
Ratio of Revenues to Expenditures	1 : 1.26	1: 0.30	1: 0.33

American Farmland Trust

Economy of the Community - GRAMPIES

- Growing Number of Retired Active People in Excellent Shape
- By 2050, 1 in 4 people in the U.S. will be over 65 and older folks are one of the fastest growing segments in our population.
- GRAMPIES are often mobile and move to live where there are recreational opportunities including green space in their communities.
- They are also relatively affluent and transfer significant assets to local investment and banking institutions.
- They are positive tax payers and use fewer services than they pay for through taxes.

Economy of the Community – Knowledge Workers

- Jobs requiring knowledge of science, technology, engineering and math (STEM) are becoming more important in the U.S. economy.
- Employers of knowledge workers do not locate their businesses to be near the natural resources required to make their products or near centers of transport for their products.
- They locate their businesses to be near an educated work force and in an area where they can retain their work force – it's the race for talent.
- A survey of 1,200 knowledge workers by KPMG in 1998 showed that quality of life in the community increased the attractiveness of a job in that community by 33%.
- They like to walk and bike, have access to green space and connect with nature and they make good money.

Competing in the Age of Talent: Quality of Place and the New Economy 2000

Economy of the Community – Knowledge Workers

- Dallas/Fort Worth Wages

Non-STEM	STEM
<u>All Wages</u>	
\$39,476	\$69,784
<u>Jobs Requiring a Bachelor's Degree or Higher</u>	
\$68,144	\$87,673
